User stories 29.3.2023

1. **Default list view**
   GIVEN some patients exist in the database
   AND fetching patient data succeeds
   WHEN the user first opens the list view
   THEN all available patients are shown on the list

2. **Fetching patient data fails**
   GIVEN the list view is open
   WHEN fetching patient data fails
   THEN no patients are shown on the list
   AND text "Failure occurred while fetching patient data" is shown

3. **Filtering the patients**
   GIVEN the list view is open
   AND some patients with *attribute* exist in the database
   WHEN the user filters the list using *attribute*
   THEN only patients with *attribute* are shown on the list

4. **Searching for a patient by ID**
   GIVEN the list view is open
   AND *patient ID* exists in the database
   WHEN the user enters *patient ID* as a filter
   THEN only the patient with the ID is shown on the list

5. **Patients do not exist**
   GIVEN the list view is open
   AND no patients with *attribute* exist in the database
   WHEN the user filters the list using *attribute*
   THEN no patients are shown on the list
   AND text "No patients found" is shown

6. **Ordering patients**
   GIVEN the list view is open
   AND some patients with *attribute* are listed
   WHEN the user orders the list using *attribute*
   THEN patients with *attribute* are listed first
   AND patients with *attribute* are listed in order of the level of *attribute*

7. **Opening patient info**
   GIVEN the list view is open
   AND *patient* is on the list
   WHEN the user selects *patient*
   THEN all available information about *patient* is shown

8. **Returning to the list view**
   GIVEN the patient info is open

WHEN the user closes the patient info
THEN the previously open list view is open
